

Our System

We offer a comprehensive business management system for the small to midsize service businesses who require up to the moment job management. Our system is internet server based and will dramatically reduce the overhead and delays ever present when trying to manage a dispersed service organization manually. It is designed to handle multiple users, complex job processing, scheduling, parts ordering, purchase order tracking and multiple source inventory control. We can also interface with other existing accounting systems.

Cost

- System cost varies by number of users and optional features requested
- A typical system costs less than \$400/month for 6 users with all optional modules
- The low setup charge includes merging our system with your present website and back office processes
- We offer a turnkey approach with a low monthly fee and 99.9% uptime

Benefits

- Much higher technician and staff productivity
- Up to the minute status on all jobs, invoices and purchase orders
- Internet based operation allows remote access to all features
- Much lower operating costs - no server or software to install per user
- Lower waste and a great reduction of redundant operations
- Offsite server and database operation assures system integrity should catastrophe strike

Features

Job Tracking and Scheduling

- Use the internet to check current job status
- Email of invoices
